CLAIMS

1. A product comprising calcium, injectable magnesium and an active ingredient which releases oxalate during its metabolism, as a combination useful for simultaneous, sequential or separate administration in anticancer or antiviral therapy.
2. The product as claimed in claim 1, characterized in that part of the calcium is in injectable form and the other part is in oral form.
3. The product as claimed in either of claims 1 and 2, characterized in that the product which releases oxalate during its metabolism is oxaliplatin.
4. The product as claimed in any one of claims 1 to 3, characterized in that the calcium is in gluconate, chloride, bromogalactogluconate, gluconolactate or carbonate form and the magnesium is in sulfate or pidolate form.
5. The product as claimed in claim 4, characterized in that the concentrations of injectable calcium are between 8 and 20 mg/ml and the concentrations of injectable magnesium are between 10 and 20 mg/ml, preferably 15 mg/ml (these concentrations are expressed as calcium ions).
6. The use of calcium and magnesium for the preparation of a combination product intended to prevent or treat the neurotoxicity caused by the administration of a product which releases oxalate during its metabolism.
7. The use as claimed in claim 6, characterized in that part of the calcium is in injectable form and the

other part is in oral form.

8. The use as claimed in claim 6, characterized in that the product which releases oxalate is oxaliplatin.
